
COSMOGRAIL TEMPORAL SHEAR ANALYSIS: KEY FINDINGS

DETECTIONS

- 5 pairs with >3σ temporal shear
- 3 independent systems
- Combined significance: $p < 10^{-10}$

TOP DETECTIONS:

- DESJ0408 A-D: Γ = -333 ± 53 (6.3σ)
- DESJ0408 B-D: Γ = -129 ± 21 (6.1σ)
- PG1115 B-C: Γ = -207 ± 38 (5.4σ)

VALIDATION

- Null controls pass (HE0435, WFI2033)
- Injection-recovery validates estimator
- No systematic false positives

REMAINING TESTS:

- Multi-band achromaticity
- Detailed lens mass modeling
- Independent replication

THEORETICAL INTERPRETATION

- |Γ| correlates with z_source (p=0.014)
- |Γ| correlates with (1+z_S)/(1+z_L)
- Consistent with TEP-GL path integral

FALSIFIABLE PREDICTIONS:

- z_S > 2.5 → |Γ| > 300 days/decade
- z_S < 0.8 → |Γ| < 30 days/decade
- Γ should be achromatic

VERDICT: CANDIDATE DETECTION FOR TEP-GL TEMPORAL SHEAR
