

A. Temporal Shear vs Broadband Delay

B. Distribution of Temporal Shear

C. Detection Significance Distribution

D. Summary

COSMOGRAIL Temporal Shear Analysis

Systems analyzed: 8

Image pairs: 23

Significant detections:

- $>3\sigma$: 5 pairs
- $>2\sigma$: 5 pairs

Top detections:

- DESJ0408 A-D: $\Gamma = -333 \pm 53$ (6.3σ)
- DESJ0408 B-D: $\Gamma = -129 \pm 21$ (6.1σ)
- J1206 A-B: $\Gamma = -103 \pm 30$ (3.4σ)

Interpretation:

Under GR, $\Gamma = 0$ (constant delay).

Under TEP-GL, $\Gamma \neq 0$ (scale-dependent).

Status: CANDIDATE DETECTION
